Main Functions

The Open Source Software **MyCoRe** Version 1.3 is available under GNU General Public License. MyCoRe is the kernel for **My Content Repository**. The sample application for document management is called **DocPortal** and it is ready to install as binary.

- **Metadata Management**
 - Customizable for documents, persons, media, etc.
 - Any metadata model is adaptable, e.g. Qualified Dublin Core metadata
- **Classification Management**, hierarchical or flat (e.g. Dewey Decimal Classification *DDC*)
- Persistent identifier with Uniform Resource Name *URN* Standard
- **Search**
 - Full-text search and parametrical search in metadata
 - Distributed/remote search via WebServices
 - MyCoRe Query Language
 - Search plug-in for Mozilla Firefox browser
 - Qualified search in XML documents
- User and rights management, access control
- **Optional Modules**
 - Web Content Management System
 - Workflow for users, e.g. authors and editors, with special user interfaces
 - Image viewer
 - Integration of audio/video streaming server possible
- **Supported Interfaces**
 - Open Archives Initiative *OAI* protocol for metadata harvesting 2.0
 - Z39.50 query interface
 - WebServices

MyCoRe Architecture

MyCoRe System Environment

MyCoRe based webapplications are installed on a web server. On client side you need a web browser like *Mozilla Firefox* or *Internet Explorer*. To run MyCoRe on a server the requirements are:

- **Operating System:** Windows, Linux, Solaris, IBM AIX or MacOS
- **Web Application Server:** Apache Tomcat, IBM WebSphere, Jetty or other Java servlet engine
- **Runtime environment:** Java 5 SDK Standard Edition
- **Database:** any SQL database system that works with hibernate like MySQL, Oracle or DB2.

DocPortal, the MyCoRe sample application, is ready to use with integrated HSQLDB and Jetty Web Application Server.
